Password Security

Keeping your online accounts safe requires strong and unique passwords. Here are some tips to improve your password security.

Use Passphrases

1

Create a long and memorable phrase that combines unrelated words, like 'correct-horse-battery-staple'

Enable MFA

2

Always turn on multi-factor authentication for important accounts, adding an extra layer of security.

Unique Passwords

3

Never reuse passwords across different services or accounts, as a breach in one could compromise others.

Use a Manager

4

Store and manage your passwords securely using a password manager, keeping them safe and organized.

Avoid Predictable

5

Don't use your name, birth date, or common phrases as passwords, as they can be easily guessed by hackers.
